

Helpful Hints for Using the PowerPoint Show

The Role of SLPs in Education

Because there are several different browser software packages used and several different versions of the software available and in use, the slide show may display differently for each user. There are 23 slides in the slide show.

You may use the show directly from the webpage by changing your screen to Full Screen.

For Internet Explorer 8.0

- The show may initially open with a black slide that will convert to the first slide of the show by moving your mouse.
- Go to the Tools button, in the upper right of the screen, and select Full Screen. (This will vary with the browser software and the version you are using.)
- With this view the top toolbar may still be visible while presenting the information.

You may also save the show and open it from your computer using your Adobe Reader software.

- From your Menu bar select *View* and *Full Screen*.
- According to the version of Adobe you have installed, this method may allow you to show the presentation in true full screen view.
